

## LISTEN AND CORRECT\_K

1 - My teacher told me that I **have to** write an essay about the future of the planet. I think that we will travel to the Moon again but we won't live **on other planets**. Mars is not far but life on Mars is impossible for humans. Science **will** help people in different ways and **there will** be a lot of innovations. I have no doubt that we will be able to **control the weather** and **I guess that** there will be a chance for humankind but to be honest I don't think that we will live **better**. I believe that the future will be better for **some** people but it will be worse for others.

2 - I **don't usually** read magazines but yesterday I read an article about the future and I **really liked it**. The article said that we will **get energy from** rubbish, but to be honest I **don't think it is true**. It also said that we will wear **body implants**, so people will always be connected to the internet. I guess that it **can** be possible because scientists can do impossible things. The article also said that we **will be able to** travel to other planets and that there will be **flying** cars but I think that the article was really imaginative and the reasons were **not really** solid.

3 - I **really like** thinking about the future. Films **usually** imagine a perfect future with flying cars and **healthy** people, but I'm not really optimistic about it. **I have no doubt that** there will be pollution everywhere. People **are not going to** stop buying a lot of things so we will produce more TVs, more clothes, more mobile phones, more everything... I think that we **are going to** destroy our world and **I'm sure that** we won't live in space stations or on **other planets**. We **are going to** destroy our planet and humans **will** disappear in the end.
